

Updates Review (Managers)

The [PPP Review](#) helps managers review and categorize reports submitted by engineers during [Updates Submission](#).

During the report review, you will have two buttons:

- **Skip:** For business as usual updates that do not require leadership visibility
- **Promote:** For updates that need to be surfaced to leadership for review.

When you click any of those, the update will be assigned the corresponding status:

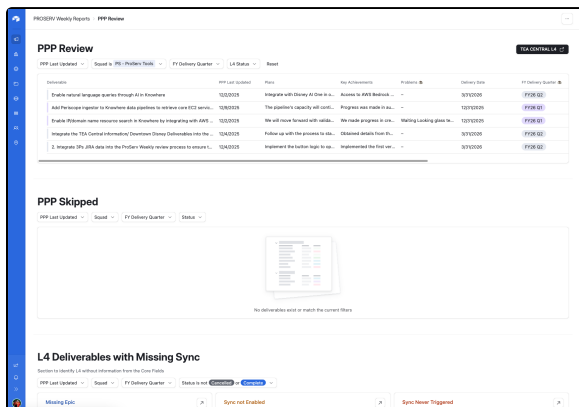

- **Promoted** reports are marked as such and sent to the [Assessment and Publishing \(Leadership\)](#) stage.
- **Skipped** reports are moved to the Skipped section, where you can recover them if you change your mind.

Since all updates submitted through this process are tied to an L4, any new update on Tuesday resets the status to "New" making it ready for review.

The following sections walk through the whole process.

Page Overview

From the [PPP Review](#) page you will be able to see all Weekly Reports submitted during the [Updates Submission \(Engineers\)](#).

The main sections are:

- **PPP Review:** New entries to review.
- **PPP Skipped:** Entries that won't be submitted.
- **L4 Deliverables with Missing Sync:** Entries missing information won't appear in **PPP Review** until the Jira integration is enabled.

In the **PPP Review** section you will see:

- **Deliverable:** L4 title.
- **PPP Last updated:** Date from the last Jira sync.

- **PPP:** Updates provided by the engineers on the associated epic.
 - **Plans.**
 - **Key Achievements (Progress).**
 - **Problems.**
- **Other information:**
 - **Delivery Date:** Defined by the L4.
 - **FY Delivery Quarter:** Defined by the Delivery Date.
 - **Promoting Status:** New, Skipped and Promoted.
 - **Priority:** Defined by the L4.
 - **Event Status:** Defined by the L4.

PPP Last Updated

Because items are filtered by promotion status, it's sometimes unclear whether an item is missing due to a sync issue or because members haven't updated it. This section lists all items to make that clearer.

PPP Last Updated				
Item Name	PPP Last Updated	Event Status	Last Modified	Last Modified By
Implement changes to the JIRA side runner to enhance...	1/6/2018	On Hold	1/6/2018	Automation
Integrate the T&A Central Information System (CIS)...	1/6/2018	On Hold	1/6/2018	Automation
Add Performance to Knowledge data pipeline to...	12/16/2017	On Hold	1/6/2018	Chris Mace
Enable Wikidata name resource search in Knowledge...	12/16/2017	On Hold	1/6/2018	Chris Mace
2. Integrate JIRA data into the Product Weekly work...	12/16/2017	On Hold	1/6/2018	Chris Mace
Enable external integration to the JIRA data pipeline...	12/16/2017	On Hold	1/6/2018	Chris Mace
1. Develop a tool to help leadership efficiently plan...	12/16/2017	On Hold	1/6/2018	Chris Mace
Improve Knowledge page rendering performance by 25%...	12/16/2017	On Hold	1/6/2018	Chris Mace
Develop a tool to help leadership efficiently plan...	12/16/2017	On Hold	1/6/2018	Chris Mace
Implement Knowledge architecture configuration to help...	12/16/2017	On Hold	1/6/2018	Chris Mace

Use the filter squad and you should be able to see all the reports associated with your squad.

- **PPP Last Updated Field:** If this field is empty, no sync has occurred. If populated, it shows the date of the last sync.
- **Last Modified By Field:** If the change was made by the automated process, this field will show Automation. If it shows another user, the changes were

likely minor updates
made directly on the
ticket.

Review Process

By default, the first section will have all **New** reports.

JIRA PPP Integration - Last Updated: 12/2/2025

Deliverable Details TEA Central

Event Description
Enable users to make natural language search queries for cloud resources.
This epic aims to integrate Generative AI (GenAI) capabilities into the KW to enable users to perform natural language search queries. Instead of relying on predefined filters, users will be able to type questions or descriptive phrases to retrieve relevant data from the system.
The integration will involve designing and implementing an NLP-powered layer that interprets user input, maps it to structured search parameters, and returns accurate, contextual results.
Improve user experience by allowing intuitive, conversational searches.
Enhance data accessibility and discovery through AI-powered search.

- Fields under the "New" label let you group and edit updates without affecting the original PPP data from the deliverable.
- The sync overwrites the editable summary from the engineers' weekly update. Other fields only need to be filled in once per L4 Deliverable.

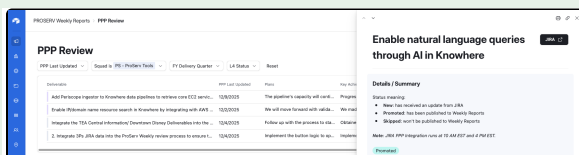

- This would be an example of the expected filled out information.
- The more details you provide, the more context available for the further review stage.

- Scrolling down reveals more details:
 - PPP TEA Central (Current):** Shows information from the TEA Central table.
 - Deliverable Details:**
 - Green button:** Opens TEA Central with the search pre-filled to find the deliverable quickly
 - Other fields:** Overview of what's in TEA Central for this deliverable

Actions

Promote

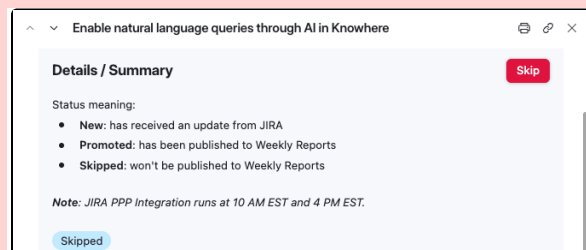

If an update is worth sharing with leadership, click the **"Promote"** button. You'll see this confirmation:

Congrats Good luck on the **Assessment and Publishing (Leadership)**.

Skip

If an update isn't worth sharing with leadership, click the **Skip** button. The view will update accordingly.

Skipped items appear under **PPP Skipped**.
